DETAILED ACTION

Allowable Subject Matter

1. Claims 2-11, 13-22, 24-30, 32-34, 36-38, 40, 41, and 43-51 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record, i.e., Nidd (US 2002/0120750), Beck et al. (US 6,604,140), Hermann et al. (US 6,633,757) and Smith et al. (US 2003/0006911) in combination, neither teach nor suggest the claimed invention unique features, i.e., conducting an inquiry to discover at least one nearby device in an ad-hoc network providing an inquiry response including bit codes, determining whether any of the inquiry responses received includes a modified bit codes as an indication that said at least one nearby device may includes a middleware layer, said middleware layer comprising a middleware software for providing application and service discovery, in response to determining that a received inquiry response does not include the indication that said at least one nearby device includes the middleware layer, disregarding the inquiry response, in response to determining that a receiving received inquiry response includes the indication that said at least one nearby device includes a middleware layer, creating a wireless short-range connection to said at least one nearby device and initiating wireless message exchange with said at least one nearby device to conduct middleware-based application and service information exchange for determining whether at least one target device supporting a required application or service is accessible in the ad-hoc network, the required application and service information including distributed information, wherein the distributed information includes: at least one reference to a required service, an association between each reference and one of said at least one target device, and state information about said at least one target device, because: Nidd (US 2002/0120750), Beck et al. (US 6,604,140), Hermann et al. (US 6,633,757) and Smith et al. (US 2003/0006911) in combination neither teach conducting an inquiry to discover a nearby device in an ad hoc network providing an inquiry response including bit codes, determining whether any of the inquiry responses received includes a modified bit codes as an indication that said at least one nearby

device may includes a middleware layer, where the middleware layer comprises a middleware software for providing application and service discovery, in response to determining that a received inquiry response does not include the indication that the nearby device includes the middleware layer, disregarding the inquiry response, in response to determining that a receiving received inquiry response includes the indication that the nearby device includes a middleware layer, creating a wireless short-range connection to the nearby device and initiating wireless message exchange with the nearby device to conduct middleware-based application and service information exchange in the ad-hoc network.

Therefore, claims 2-11, 13-22, 24-30, 32-34, 36-38, 40, 41, and 43-51 are deemed allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
